

Name: Amy D. Anderson

Institutional Affiliation: Department of Mathematics, Western Washington University

Biography:

Dr. Anderson received her PhD in Statistics with a certificate in Statistical Genetics from the University of Washington in August 2003. For the past four years, she has been a regular instructor in the Summer Institute of Statistical Genetics, where she has contributed to the “Population Genetics” and “Interpreting DNA Evidence” modules. Recent research topics include the development of methodology for inference of pairwise genetic relationships using genetic marker data and the analysis of genotype-phenotype association data.
